

AMENDMENTS TO THE CLAIMS:

Please amend the claims as shown in the following Listing of Claims.

1. **(currently amended)** A parking brake actuator for a motor vehicle, said parking brake actuator comprising, in combination:
a fixed support;
a lever pivotably connected to said support for movement between brake-releasing and brake-engaging positions;
a locking mechanism adapted to releasably maintain said lever in said brake-engaging position;
an electrical switch having a blade operable to indicate when said lever is out of said brake releasing position; and
wherein said switch blade is secured directly to said fixed support
wherein said switch is located near a mounting hole formed in the fixed support which receives a fastener to secure the fixed support to the motor vehicle; and
wherein said switch extends to the mounting hole to contact the fastener in the mounting hole to connect the switch to ground.

2. **(original)** The parking brake actuator according to claim 1, wherein said fixed support forms a unitary mounting bracket for securing said switch blade to the fixed support.

3. **(original)** The parking brake actuator according to claim 2, wherein said unitary mounting bracket forms a slot for receiving a portion of said switch blade to secure the switch blade to the fixed support.

4. **(original)** The parking brake actuator according to claim 2, wherein said fixed support and said unitary mounting bracket are molded of plastic.

5. **(original)** The parking brake actuator according to claim 2, wherein said mounting bracket secures a terminal of the switch to the fixed support.

6. **(original)** The parking brake actuator according to claim 5, wherein said unitary mounting bracket forms a slot for receiving a portion of said terminal to secure the terminal to the fixed support.

7. **(original)** The parking brake actuator according to claim 1, wherein said switch includes a terminal secured directly to said fixed support.

8. **(cancelled)**

9. **(cancelled)**

10. **(original)** The parking brake actuator according to claim 1, wherein said switch is secured to said fixed support without mechanical fasteners.

11. **(currently amended)** A parking brake actuator for a motor vehicle, said parking brake actuator comprising, in combination:

a fixed support;

a lever pivotably connected to said support for movement between brake-releasing and brake-engaging positions;

a locking mechanism adapted to releasably maintain said lever in said brake-engaging position;

an electrical switch having a blade operable to indicate when said lever is out of said brake releasing position;

wherein said fixed support forms a unitary mounting bracket for securing said switch blade to the fixed support; and

wherein said fixed support and said unitary mounting bracket are molded of plastic

wherein said switch is located near a mounting hole formed in the fixed support which receives a fastener to secure the fixed support to the motor vehicle; and

wherein said switch extends to the mounting hole to contact the fastener in the mounting hole to connect the switch to ground.

12. **(original)** The parking brake actuator according to claim 11, wherein said unitary mounting bracket forms a slot for receiving a portion of said switch blade to secure the switch blade to the fixed support.

13. **(original)** The parking brake actuator according to claim 11, wherein said mounting bracket secures a terminal of the switch to the fixed support.

14. **(original)** The parking brake actuator according to claim 13, wherein said unitary mounting bracket forms a slot for receiving a portion of said terminal to secure the terminal to the fixed support.

15. **(cancelled)**

16. **(cancelled)**

17. **(original)** The parking brake actuator according to claim 11, wherein said switch is secured to said fixed support without mechanical fasteners.

18. **(original)** A parking brake actuator for a motor vehicle, said parking brake actuator comprising, in combination:

a fixed support;

a lever pivotably connected to said support for movement between brake-releasing and brake-engaging positions;

a locking mechanism adapted to releasably maintain said lever in said brake-engaging position;

an electrical switch operable to indicate when said lever is out of said brake releasing position;

wherein said switch is located near a mounting hole formed in the fixed support which receives a fastener to secure the fixed support to the motor vehicle; and

wherein said switch extends to the mounting hole to contact the fastener in the mounting hole to connect the switch to ground.

19. **(original)** The parking brake actuator according to claim 18, wherein said fixed support forms a unitary mounting bracket for securing a switch blade of the switch to the fixed support and wherein said fixed support and said unitary mounting bracket are molded of plastic.

20. **(original)** The parking brake actuator according to claim 18, wherein said switch is secured to said fixed support without mechanical fasteners.
